Dr. Bruce Hollaway
Australian National Univ.
Box 4, Canberra, A.C.T.

Dear Dr. Hollaway:

I was very much pleased to receive your note of Jan. 2, and its information on your move to Melbourne. Good luck to you there.

The time is coming when my wife and I have to make explicit plans for our teaching program during our visit. It will be a great reassurance to know that someone with your experience will be on hand—I will have to ask your advice for many aspects of it, I am sure. We are not yet too certain of what will be expected of us, though I imagine we will be committed to a two- or three-hour lecture and lab. course for the winter quarter (ca. June-~~September~~ Aug. incl.) How does this related to your own teaching plans, or is it too soon to say?

We will be in constant touch with Syd Ribbo about this, in any case.

I hope we can run through some experiments together while we're there. Perhaps we should bring along some *P. fluorescens* auxotrophs that I made some years ago (and gave nothing very promising in intra line tests). Anyhow, we're looking forward to seeing you.

Your name is on our regular mailing list, and unless you're in a particular hurry, you don't have to trouble about asking for individual reprints. I will be pleased to count on the same conversely.

Yours sincerely,

Joshua Lederberg
